No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 87,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                        1 ctgcacggtactccaagtat......cgatccattctccagcgcag 823

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Novel promoters isolated from corn for controlling gene expression in male reproductive tissues, such as anthers, tassels, and to regulate transcription of target genes including genes for insect or pathogen tolerance

Claim 1; Page 113-114; 121pp; English.

The present invention relates to the isolation of plant regulatory sequences from the male reproductive tissues of corn (Sea mays). The promoter sequences, fragments, regions or cis elements of the sequences, are capable of regulating transcription of an operably linked DNA

```
sequence. The promoter sequences confer enhanced expression of operably linked genes in monocot or dicot male reproductive tissues, such as anthers, especially wheat anthers and is useful for regulating transcription of a DNA sequence, by operably linking the DNA sequence to transcription of target genes including genes for control of fertility, insect or pathogen tolerance and herbicide tolerance. They are also useful as probes or primers in nucleic acid hybridisation experiments. The promoter sequences can be used in hybridisation assays of other plant tissues to identify closely related or homologous genes and associated regulatory sequences. The present invention relates to the isolation of plant regulatory sequences from the male reproductive tissues of corn (Zea mays). The promoter sequences, regions or cis elements of the sequences, are capable of regulating transcription of an operably linked DNA sequence requences confer enhanced expression of operably linked GNA anthers, especially wheat anthers and is useful for regulating contractive tissues, such as anthers, especially wheat anthers and is useful for regulating the DNA sequence. The promoter sequences are useful in plants to regulate transcription of target genes including genes for control of fertility. Insect or pathogen tolerance and herbicide tolerance. They are also useful as probes or primers in nucleic acid hybridisation assays of other plant tissues to identify closely related or homologous genes and associated tissues to identify closely related or homologous genes and associated transcription.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 õ

The invention describes a recombinant DNA construct comprising a polymucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at available in electronic form from the US patent office at polymucleotide of the invention are also useful in physical arrays of molecules and as plant breading markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or perss, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, lighin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one content. This sequence represents a plant full length insert content. On the content of the recombinant DNA construct of the polymucleotide that can be used in the recombinant DNA construct of the

The invention relates to transforming a plant cell with either a nucleic acid encoding a plant cuticular lipid biosynthetic protein, or an antisense nucleic acid sequence targetred to a plant cuticular lipid gene, and then generating a plant from the plant cell. The cuticular lipid genes that may be used in the invention are given in AAA57871-A57884 and AAA57891. The cuticular consists of a meshwork (cutin) of cross-seterified polymerised hydroxy-fatty acids embedded in a complex mixture of nonpolar lipids (the cuticular axa). The cuticula protects and strengthens the plants, prevents evaporation of internal fluids and filters UV radiation. Mutations in the cuticular lipid genes affects the quantity and composition of cuticular lipids; in maize, 17 loci (the glossy (gl)) genes) have been identified as being in involved in cuticular lipid sownthesis or control. The method is useful for introducing a nucleic acid into a cell preferably of maize, soybean, rapeseed, canola, cotton, safflower, peanut, palm or sunflower plant and generating a plant from the plant cell. The transformed plants have improved environmental resistance relating to wind, frost, UV or drought; fungal, bacterial or viral disease resistance, september in sequence represents the maize glossy2 (gl2) gene
                                                                                                                                                                                                                                                   Transforming plants such as maize and canola, for producing new plant varieties having disease and pest resistance involves introducing cuticular lipid genes into the plant genome.
                                                                                                                                                            Robertson DS,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            121 CCAATCAGATAGTCTCCTGTCCCGAATATAGAGCTAAGACACTGTGTCTTCGTCAAGATA 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent of file at the sequence. The parent of the polynucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for plant breeding markers. The recombinant DNA construct is useful for plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing glactomanna, lignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or photosynthesis or carbohydrate, nitrogen or photosynthesis or carbohydrate, nitrogen or photosynthesis or carbohydrate, nitrogen or photosynthesis or carbohydrate, nitrogen or photosynthesis or carbohydrate, nitrogen or photosynthesis or carbohydrate, nitrogen or photosynthesis or carbohydrate, nitrogen or photosynthesis or carbohydrate, nitrogen or photosynthesis or carbohydrate, nitrogen or photosynthesis or carbohydrate, nitrogen or photosynthesis or carbohydrate, nitrogen or photosynthesis or carbohydrate, nitrogen or photosynthesis or carbohydrate, nitrogen or photosynthesis or carbohydrate, nitrogen or property or produced the page and or produced the page and or produced the page and or photosynthesis or carbohydrate, nitrogen or produced the page and or produced the page and or produced the page and or produced the page and or produced the page and or produced the page and or produced the page and or produced the page and or produced the page and or produced the page and or produced the page and or produced the page and or produced the page and or produced the page and or produced the page and or produced the page and or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This, sequence represents a plant full length insert polynucleotide that can be used in the recombinant DNA construct of the
  plant protectant; plant growth regulant; gene therapy; plant; recombinant DNA construct; physical array; plant breeding marker; cold tolerance; heat tolerance; drought tolerance; herbicide tolerance; extreme osmotic condition; pathogen tolerance; pest tolerance; growth rate; cell cycle pathway; disease resistence; pest tolerance; yield; plant growth, plant development; seed oil; protein yield; protein content; gene; ss.

This is the nucleotide sequence of the maize per5 root preferential cationic peroxidase gene, which encodes a 333-amino acid peroxidase polypeptide (see AAW8783). Genomic clones comprising per5 sequences were isolated from a maize W22 genomic library using a probe based on isolated from a maize W22 genomic library using a probe based on isolated per5 cDNA. Overlapping subfragments of the gene were sequenced to ger5 cDNA. Overlapping subfragments of the per5 gene. Regulatory sequences derived from the per5 gene, including the promoter, introns and 3 untranslated region (3/UTR), are used in claimed recombinant gene cassettes for controlling expression of recombinant genes in selected itsue, especially the root, of transformed plants, particularly maize. The gene cassettes can be used for expression of heterologous genes such as those that confer tolerance to herbicides, insects or viruees, and genes that provide improved nutritional value or processing characteristics to the plant. Use of the per5 3'UTR sequences provides characteristics to the plant. Use of the per5 3'UTR sequences provides 3'UTR. \*tag= r note= "this sequence is specifically claimed in Claim 2" \*tag= u note= "this sequence is specifically claimed in Claim 2" 542. .5654 /notes "transcription termination sequence, specifically claimed in Claim 3" \*tag= p number= 1 not== "this intron is specifically claimed in Claim 2" (059 q \*tag= q number= 3 note= "this intron is specifically claimed in Claim 2" i650. .6065 \*tag= 8 number= 2 number= this intron is specifically claimed in Claim 2" 383. .5548 \*tag= x note= "this sequence is specifically claimed in Claim 549. 5649 Hopkins N, Menke MA, New isolated regulatory sequences for transgenic plants - which are derived from the maize root preferential cationic peroxidase protein Folkerts O, Woosley A;

This is the nucleotide sequence of PerGUS, a plasmid containing 4 kb of the maize root preferential cationic peroxidase perS gene comprising the perS promoter, untranslated leader, and the first 5 codons of the coding region (i.e. nucleotides 1-4200 of the sequence given in AAV6317), as well as the GUS gene, and the nots 3' untranslated region (3'UTR). It does not include an intron in the untranslated region. The invention relates to new isolated regulatory sequences, especially promoter, intron and 3'UTR sequences, of the maize perS gene. Claimed recombinant gene cassettes comprising perS regulatory sequences are used to control expression of recombinant genes in selected tissue, especially the root, of transformed plants, particularly maize
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ï

kb of the maize root preferential cationic peroxidase per5 gene comprising the per5 promoter, untranslated leader, and the first 5 codons of the coding region (1.e. nucleotides 1-4200 of the sequence given in AAV63117), as well as the GUS gene, and the per5 3 untranslated region (3'UTR, i.e. nucleotides 6069-6419 of the sequence given in AAV63117). It demonstrated that the per5 promoter, in the absence of an intron, drives constitutive expression of transgenes in rice. The invention relates to sequences, of the maize per5 gene. Claimed recombinant gene cassettes comprising per5 regulatory sequences are used to control expression of recombinant genes in selected tissue, especially the root, of transformed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This is the nucleotide sequence of PERGUSPER3, a plasmid containing 4.2 kb of the maize root preferential cationic peroxidase per5 gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated regulatory sequences for transgenic plants - which are derived from the maize root preferential cationic peroxidase protein

Corn KCP-like protein encoding DNA, SEQ ID NO

```
use invention relates a recombinant with constitute compitating a polypeptide with any of 5544 amino acid sequences (SD44) and encoding any of 5544 untoleotide sequences (SD44) and encoding a polypeptide with any of 5544 amino acid sequences (SD41) No: 5545-11089. The CDNAs and proteins are from corn. soybean, actability of the sequences is derived from which organism. Also included is a method of sequences is derived from which organism. Also included is a method of producing a plant having an improved property, comprising transforming a plant with a recombinant DNA construct comprising a promoter region functional in a plant cell operably joined to a polynucleotide encoding a plant with a recombinant DNA construct comprising a promoter region functional in a plant cell operably joined to a polynucleotide encoding a plant. The property is selected from improving plant cold tolerance, for plant. The property is selected from improving plant cold reseased cresistance to plant disease, for glactomannan production, for production of plant growth regulators, for improving plant tolerance to collaring plant tolerance to extreme osmotic conditions, for improving plant tolerance to extreme osmotic conditions, for improving plant tolerance to extreme osmotic conditions, for improving plant tolerance to extreme osmotic conditions, for improving plant collaring seed protein yield and/or content, for modifying seed protein yield and/or content, for modifying seed protein yield and/or content, for and for yield improvement by providing improved plant growth and development under at least one stress condition. The polymucleotide may also encode a plant transcription factor. The methods and compositions of the present invention are useful in the field of blochemistry and proved introgen collaring the methods and compositions of plants with improved mitrogen plants with improved mitrogen collaring to a plant transcription factor. The methods and compositions of plants with any providing improved methods and composition where 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1088 CAATAAATTAAAGTGACCAATCAGCTAGTCTCCTGTCTCGAACATGAAGTTAAAGTAAGATACTG 1029
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               224
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  970
               New recombinant DNA constructs useful in the field of biochemistry and genetics, and in particular for producing transgenic plants with improved
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          flow, increasing plant tolerance to cold or heat, improving plant tolerance to extreme osmotic and drought conditions, and improving plant tolerance to plant pests or pathogens. They can also be used in physical arrays of molecules, plant breeding markers, computer-based storage and analysis systems. The present sequence is one of the 5544 plant cDNA sequences of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1028 TGTCTTCGTC-AGATACATGTCTTGAGTTTTTTTACATTCACCCCCCTAAACACACTCTA

The invention relates to an isolated polynucleotide encoding a polypeptide which is related to potato snakin antimicrobial protein and GASA4 or GAST1 homologues, which is referred to as lysine- and cysteine- rich peptides (KCP)-like polypeptide, having a nucleotide sequence from 36 sequences of defined base pairs, given in the specification. A recombinant expression cassette comprising the isolated polynucleotide of the invention is useful for modulating the level of (KCP)-like polypeptides is increased, and disease resistance is enhanced. This polypurcleotide sequence represents the DNA encoding a KCP-like protein of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 TAAAACATGTGTCTTACCATATTCATTGTATCAATCAGAACATTCAATAAATTAAAGTGA 120

The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactemannan, lightin or plant growth regulators, for increaseling the rate of homologous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert polynucleotide that can be used in the recombinant DNA construct of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
